LAND RIG

-
1. Increased production and efficiency requires better methods and equipment. In the past, traditional vertical down hole drilling involved only static pressures.
 2. Production competition led to the development of directional drilling and down linking with negative pressure pulses and elevated temperatures.
 3. Gates offers a high performance dynamic pressure rated swage-on coupling that meets the demands of today's higher performance drilling methods.
 4. These new dynamic couplings are performance proven.
 - Grade "D" provided since 1998
 - Grade "E" provided since 2004
 5. They can be swaged to rotary hose by certified assemblers at various locations around the world making special orders quickly available to drillers.
